Life. Made better.™

PORTABLE SOLAR GENERATION NOTIFICATION FORM (BALCONY SOLAR)

Under Maryland law, customers must notify Easton Utilities before the installation of a portable solar energy generating system. Registering your Portable Solar Energy Generating System (Balcony Solar) is important and helps protect crews that may be working on powerlines.

BEFORE INSTALLING A SYSTEM

- Ensure your equipment is certified and approved for use in the U.S.
- Follow the National Electrical Code (NEC), State of Maryland requirements, and all other applicable safety codes
- Consult a qualified electrician if you are unsure whether your residence's electrical system is compatible with the equipment
- Avoid using damaged equipment or improper connections
- Ensure the total combined output of all your portable solar systems does not exceed 1,200 watts

Easton Utilities standard service meter does not have a separate register to track energy that is fed from the customer back to the Company's electric distribution system. If the account has not applied for interconnection in the past, it will have a standard service meter.

Installation of behind-the-meter devices is at the customer's own risk. Easton Utilities will not install, inspect, maintain, or approve portable solar generation systems. If a portable solar generation system creates a safety hazard or affects electric service, Easton Utilities may take action, including disconnection of service if necessary to protect public safety.

If you have any questions, please contact Easton Utilities at 1-410-822-6110.

Additional information on Portable Solar Generation (Balcony Solar) can be found on the [MD PSC Balcony Solar Webpage](#).
